

社團法人臺灣職能治療學會
第 19 屆第 1 次會員大會暨第 4 次國際學術研討會
第 3 屆台日職能治療論壇暨教育部
精準健康產業跨領域人才培育計畫：健康福祉論壇

指導單位：教育部

主辦單位：社團法人臺灣職能治療學會、臺灣大學職能治療學系共同主辦

合辦單位：長庚大學職能治療學系

大會地點：國立臺灣大學公共衛生學院職能治療學系(臺北市中正區徐州路 17 號)

大會日期：2022 年 12 月 03 日(六)至 12 月 04 日(日)

聯絡方式：秘書處 02-2382-0103 或 tota@ot.org.tw

繼續教育積分：職能治療師繼續教育積分認證申請中，需於早上、中午、下午簽到，始核發學分證明

註冊/報名方式：經通知確定被收錄海報/口頭/工作坊之發表者，每篇作者群至少一位務必至本會官網另外報名參與研討會，如投稿為口頭報告，當日報告者亦需報名，並於報名時備註填寫投稿稿件編號(1110XXX)

※投稿成功不等同於完成報名研討會

報名網址：

(一) 發表者：<http://www.ot.org.tw/index.php?action=physical-course-apply&id=26>

(二) 非發表者-早鳥：<http://www.ot.org.tw/index.php?action=physical-course-apply&id=27>

(三) 非發表者-一般：<http://www.ot.org.tw/index.php?action=physical-course-apply&id=28>

(四) 非本國人士：<https://forms.gle/3KdNP6CucPSehV6UA>

註冊資訊	
發表者註冊	2022 年 10 月 01 日至 10 月 30 日
早鳥註冊(優惠)	2022 年 10 月 07 日至 10 月 30 日
一般註冊	2022 年 11 月 01 日至 12 月 02 日
現場註冊	2022 年 12 月 03 日至 12 月 04 日

活動日程	
開幕式	2022 年 12 月 03 日 14:00
學術研討會	2022 年 12 月 03 日至 04 日

報名費用		
台日職能治療論壇暨學術研討會		
臺灣職能治療學會會員	免費	
非本會會員	JAOT 會員	NTD 500
	早鳥優惠	NTD 800
	一般價格	NTD 1200
	現場價格	NTD 1500

繳費方式：一律以線上報名後並直接以虛擬帳號方式至 ATM 或網路銀行繳費，未繳費者視同未完成報名手續。繳費方式如下：

代碼 006-合作金庫虛擬帳號 1347112-身分證字號後 9 碼(不含英文)，共 16 碼。

例如：學員身分證號為 A123456789，繳款帳號則為 006-1347112-123456789

論文發表形式：

一、口頭報告：

- (一) 發表語言：繁體中文或英文。
- (二) 發表時間：將於本會網站與研討會網站另行公告與通知
- (三) 報告者必須為作者群之一，並需報名研討會。

二、海報展示：

- (一) 發表語言：繁體中文或英文。
- (二) 發表格式：將於本會網站與研討會網站另行公告與通知
- (三) 張貼時間、方式：研討會當天現場自行張貼，開放張貼與展示時間將另行公告

三、工作坊

- (一) 發表語言：繁體中文或英文。
- (二) 發表時間：將於本會網站與研討會網站另行公告與通知
- (三) 報告者需報名研討會。

學術研討會優良論文評選

有關學術研討會獎勵優良論文獎，參與人須為本會有效之個人會員、準會員或學生會員，均以第一作者身分為認定，分為學生組或專業組評分。優良論文評選將於閉幕式時公告，獎狀與獎勵金將於現場發給。如得獎作品之作者群現場無人出席，將保留其名次但取消其獎金之獎勵。

注意事項：

1. 因應疫情可能之調整，相關訊息將於學會網頁『最新公告』公告，不再另行通知。
2. 本次會議不提供午餐，會員參加可獲得紀念品一份。

※各發表場次待議程確認後將另行公布

專題演講：

2022臺灣職能治療學會國際學術研討會

● 講題：

Dynamic Rehabilitation to Empower Ability Management (DREAM)

因應大數據時代的來臨，職能治療師要如何將臨床實務的鎖碎訊息，整理規劃為強而有力的數據，提高醫療品質？

本場演講張教授將分享臨床研究與大數據結合的豐富經驗，提昇OT臨床實證。

● 時間: 12.03.2022 14:20-15:20

張志宏 教授

美國聖路易華盛頓大學醫學院

台灣大學公衛大樓

2022臺灣職能治療學會國際學術研討會

● 講題：

建構智慧醫療與醫養合一連續型照護模式

說明：台灣將於2025年邁入超高齡社會，如何將智慧科技融合健康促進、精準醫療照顧以減少醫療及長照資源的耗用並建立高齡友善醫療長照生態系為當務之急。本次演講將會從精準健康的角度切入，介紹台灣資通訊建設及雲端化系統之於高齡健康促進及歸人醫養合一長照體系之應用。

● 講者: 邱弘毅 博士

國家衛生研究院
群體健康科學研究所
特聘研究員兼所長

時間: 12.04.2022 9:30-10:30

台灣大學公衛大樓

教育部 精準健康產業跨領域人才培育計畫協助監督指導

2022 第 3 屆台日職能治療論壇暨教育部

精準健康產業跨領域人才培育計畫：健康福祉論壇

一、主辦單位：社團法人臺灣職能治療學會、日本作業療法士學會、長庚大學

二、目的：

臺灣職能治療學會於 2016 年 11 月與日本作業療法士協會(Japanese Association of Occupational Therapists, JAOT) 達成兩會持續於學術與實務方面交流之共識，希望透過兩會的交流提升雙方職能治療之服務品質，給予個案更全面之照護服務。兩會同意每兩年舉辦台日職能治療論壇，以落實資訊及經驗之交流及分享。今年第三屆台日職能治療論壇暨教育部精準健康產業跨領域人才培育計畫：健康福祉論壇訂於 2022 年 12 月 03 日在台北舉辦，將以促進個體的健康福祉為出發點，探討急性後期個案及發展障礙兒童的職能治療服務模式。

本屆論壇邀請任教於美國聖路易華盛頓大學醫學院的張志宏教授主講「健康福祉與精準醫療的關係」。另有兩個主題報告將探討職能治療師如何協助個案從醫療機構順利回歸或融合到社區（包含居家及學校等場域）生活及提升個案在日常生活的參與及安適感，台日雙方將分享各自國內的現況與展望。第一個主題報告「職能治療在急性後期整合照護計畫（Post-Acute Care，簡稱 PAC）的角色」，將由日本 Mr. Sakai Yasutoshi 及台灣張婉嫻兩位職能治療師介紹台、日兩國的 PAC 概況及分享職能治療師在急性後期如何以提升個案生活品質為目標，協助個案順利從醫療機構回歸到居家環境，包括協助個案及其家人預想回歸居家生活後的樣貌，進行居家環境評估及改造等，以使個案能重新適應，享有好的生活品質。第二個主題報告「對發展障礙兒童的職能治療服務」，將由日本 Ms. Nakama Chihiro 與台灣黃俐貞兩位職能治療師分別介紹日本學校系統的職能治療師以職能為焦點，跟學校教師協同合作的經驗以及台灣的職能治療師在醫療機構及學校社區服務落實以職能為焦點的服務及服務發展障礙兒童的新近發展。

期待此次論壇可以讓與會人員更了解如何將臨床業務及精準醫療的發展結合，同時也能互相交流如何秉持職能治療的核心價值，提供以「職能」為焦點的服務，使個案能適應環境、發揮潛能並進而促進個案的生活參與及健康福祉。

三、日期：111 年 12 月 3 日(星期六) 早上 8:40-12:30

四、課程地點：公衛大樓

五、參加對象：職能治療師及相關專業人員

六、報名期限：即日起至額滿為止。

七、報名方式：臺灣職能治療學會學會網頁

八、教育積分：本會將依學員實際參加時數發給出席證明。本會經行政院人事行政局核准為公務人員終身學習之學習機構，可認證學習時數。全程參與者，核給職能治療師繼續教育積分 3.6 點。

九、課程負責人：臺灣職能治療學會學會國際事務委員會黃俐貞委員

十、本會負責人：吳菁宜理事長

本會聯絡人：呂家誌秘書長、張婉嫻副秘書長、黃上育副秘書長、李冠逸副秘書長、
陳欣愉秘書、劉祐成秘書、李佩真秘書

講者簡介與主題摘要

Title: The Role of Occupational Therapy in Post-Acute Care

Speaker 1: Sakai Yasutoshi

Education:

March, 1994 Bunkyo University Faculty of Education (Bachelor of Education)

March, 2002 Waseda College of Medical Arts and Sciences, Department of Occupational Therapy (Diploma of Occupational Therapy)

Work Experience

April, 1994~March, 1998 Tokyo Metropolitan Oji Daini School for the Children with Disabilities

April, 1998~March, 1999 Tokyo Metropolitan Koiwa School for the Children with Disabilities

April, 2002~Present Center for Children with Developmental Special Needs UMEDA ·
AKEBONO GAKUEN

Abstract:

Rehabilitation programs in Japan are divided into acute, convalescent, and post-acute care phases. The roles and functions of each phase are clearly defined. In the acute phase, early intervention is recommended. Early intervention enables prevention of bedridden state and reduction of prognostic symptom. In the recovery phase, Clients with stable medical conditions are targeted. Recovery phase rehabilitation is often conducted intensively in specialized medical facilities, and some facilities offer rehabilitation programs throughout the year. The living phase focuses on improving the quality of life of client. Rehabilitation is provided through day care center and home visits. Many services are covered by long-term care insurance. The role of the occupational therapist in each phase is described below. Acute Phase: Occupational Therapist support client to improve function and ADL for their new life. And to prevent other functional decline. Recovery phase: Occupational Therapist provides the client with a concrete image of living at home after discharge from the medical facility. In addition, we evaluate the living environment of client. Based on the results, we will provide the program to improve the necessary functions and ADL. Living phase: Occupational Therapist solve the various difficulties client faced in actual living situations. The Japanese Association of Occupational Therapists has been launching various initiatives to strongly promote this trend.

Speaker 2: Wan-Ying Chang

Education

June 2013 National Taiwan University, School of Occupational therapy (Master Degree)

Work Experience

1998~Present Chief of Therapist. Occupational Therapist. Division of Occupational Therapy,
Taipei Hospital, Ministry of Health and Welfare

2008~2010 Director. Taiwan Occupational Therapy Association

2005~2008 Director. Taiwan Occupational Therapists Union

2008~2011 Executive Director. Taipei County Occupational Therapists Union

2013~2016 Supervisor. Taiwan Occupational Therapy Association

2020~Present Executive Supervisor. New Taipei City Occupational Therapy Union
2019~Present Deputy Secretary. Taiwan Occupational Therapy Association
2000~Present School System Project Leader. Taiwan Occupational Therapy Association /
Education Department, New Taipei City

Abstract:

Patients who become stable in the acute phase are often worried about the care after returning home and would request longer stay in the hospital. The decreased care intensity, or the phenomenon of clients seeking admission to large hospitals for further rehabilitation reflect the need of improving medical services quality and the efficiency of resource use. Therefore, from 2014, the National Health Insurance Administration in Taiwan has implemented the Post-acute Care (PAC) Service programs. This post-acute integrated care model has been established through payment reform to improve the care quality. It includes 6 sub-programs: (1) Stroke, (2) Burn, (3) Traumatic Neurological Injury, (4) Specific Fracture (5) Heart Failure, (6) Aging Frailty. A total of 277 hospitals joined the PAC program, 217 of them provide stroke PAC, 29 provide burn PAC, 149 provide traumatic neurological injury PAC, 189 provide Specific fracture PAC, 149 provide aging frailty PAC, and 35 provide heart failure PAC.

In each sub-program professional assessment of daily living functions are emphasized. As a profession that long focused on an individual's participation in daily occupation, occupational therapists (OT) play a very important role in helping patients in the PAC program in gaining as much independence as possible. OT working in the PAC programs assist patients to reach their full potential during the prime period hoping to restore life function and reduce the impact of disability. OT design individualized therapeutic tasks according to the client's needs to promote active movements that lead to smooth performance of functional tasks. In the PAC programs, occupational therapy service emphasizes more on motor skills relearning, prevention of disability and home environment assessment and modification. We hope to reduce the psychological damage caused by disease, and enhance patients' quality of life.

Through proper selection of appropriate patients and high-intensity training, patients can make significant progress in Post-Acute Care programs. Provision of active and integrated PAC care is efficient in function restoration or reduction of the degree of disability. It also helps to reduce subsequent medical expenses of re-hospitalization.

Title: Occupational Therapy for Children with Developmental Disabilities

Speaker 1: Nakama Chihiro

Education:

March, 2002 Tokyo Metropolitan University of Health Sciences, Department of Occupational
Therapy (Bachelor of Occupational Therapy)

Work Experience:

April, 2002~March, 2005	Kawakita Rehabilitation Hospital
April, 2005~March, 2008	Tapic Okinawa Rehabilitation Hospital
April, 2009~November, 2015	Ryukyu Rehabilitation Academy
January, 2016~Present	YUIMAWARU Co., Ltd. Children's Center YUIMAWARU. CEO

Abstract:

Education in Japan has been required to develop special needs education to establish inclusive education system which respects diversity and allows all children with or without disability possible to participate effectively in a free society by developing and learning together. On the other hand, at a school site, the number of children who need special needs education have increased more than double over the last decade. Strengthening cooperation with experts which are mainly teachers and building a team including families have received attention to achieve development of special need education. The opportunities of providing Occupational Therapist service at schools have increased recently though those have not been sufficient.

However, occupational therapy viewpoint attracts attention and Occupational Therapist is now necessary as an expert in schools. We, occupational therapists, have a view of “focusing on occupations” which other professions do not have and furthermore Occupational Therapist have a professional skill of “making executions of occupation happen.” This shows a new role of experts (Occupational Therapist) that empowers and consults teachers and parents so that teachers pursue “education that we want to provide (teachers’ work)” as opposed to “dealing with problematic behavior of children” which have been provided by experts until now. I would like to introduce a case of occupational therapy at school that has been conducted under a concept of “education we want to provide to all children.”

Speaker 2: Lichen Huang

Education

January, 2000 Boston University, Department of Occupational Therapy (Master of Science)

June, 1991 National Taiwan University, School of Occupational Therapy (Bachelor)

Work Experience

2002~Present Occupational therapist, Taipei City Hospital Child Developmental Assessment and Intervention Center (chief of therapists since 2014)

1996-2001 Occupational therapist, Taipei City School System

1991-1993 Pediatric occupational therapist, National University Hospital

Abstract:

Occupational therapy (OT) services for children with developmental disabilities(DD) have proliferated since its start in more than 50 years ago in Taiwan. Nowadays, these different models of OT service delivery have been developed. Beside medical institutions, OT services for children with DD are now provided in different contexts including schools, development centers, private practice and homes as a result of the advocacy of parents groups, amendment of Special Education law and the implementation of long term care services. With the expansion of intervention into the child’s natural living environments, pediatric OT clinicians in Taiwan are constantly readjusting their service focus and models to meet the client’s needs. Though challenging, it gives OT clinicians a better opportunity to understand the child’s engagement in their daily occupation. On the other hand, researchers in pediatric OT area have also been examining and developing evidenced based programs and tools for children with special needs. Both OT clinicians and researchers in Taiwan have devoted efforts in promoting participation of our clients in daily occupations and empowering their families. This presentation will make a brief introduction of 1)current pediatric OT service practices for children with DD in Taiwan, especially in school

systems and communities; 2) ongoing research and application of technology in intervention of children with DD; 3) OT professionals' participation in advocacy of rights for children with developmental disabilities.

2022 3rd Taiwan-Japan Occupational Therapy Joint Symposium

Health and Well-being for Interdisciplinary Talents of Precision Health

Host: Taiwan Occupational Therapy Association (TOTA)

Japanese Association of Occupational Therapists (JAOT)

Funding Support: Ministry of Education “Training Program for Interdisciplinary Talents of Precision Health

Purpose:

The Taiwan-Japan Occupational Therapy Joint Symposium aims to promote the quality and knowledge of the occupational therapy profession in Japan and Taiwan through sharing of professional information and experiences of the two countries. This year the symposium is scheduled on December 3rd. We invited a guest speech “Health Well-being and Precision Medicine” which will be presented by Prof. Chih-hung Chang. The two themes for 2022 are “Health and Well Being: The Role of OT in Post-Acute Care (PAC)” and “Health and Well Being: OT for Children with Developmental Disabilities”, each theme has two topics to be presented by two specialists, each from Japan and Taiwan. The speakers will focus on how OT services could be provided from an occupation based perspective, sharing innovation and experiences in ways to promote client’s participation in meaningful occupations, It is expected that the symposium could facilitate future international collaboration and interaction. The symposium is open to everyone.

Venue: National Taiwan University, School of Occupational Therapy, Taiwan
17, F4, Xu Zhou Road, Taipei City, Taiwan (R.O.C)

2000~Present School System Project Leader. Taiwan Occupational Therapy Association / Education Department, New Taipei City

Abstract:

Patients who become stable in the acute phase are often worried about the care after returning home and would request longer stay in the hospital. The decreased care intensity, or the phenomenon of clients seeking admission to large hospitals for further rehabilitation reflect the need of improving medical services quality and the efficiency of resource use. Therefore, from 2014, the National Health Insurance Administration in Taiwan has implemented the Post-acute Care (PAC) Service programs. This post-acute integrated care model has been established through payment reform to improve the care quality. It includes 6 sub-programs: (1) Stroke, (2) Burn, (3) Traumatic Neurological Injury, (4) Specific Fracture (5) Heart Failure, (6) Aging Frailty. A total of 277 hospitals joined the PAC program, 217 of them provide stroke PAC, 29 provide burn PAC, 149 provide traumatic neurological injury PAC, 189 provide Specific fracture PAC, 149 provide aging frailty PAC, and 35 provide heart failure PAC.

In each sub-program professional assessment of daily living functions are emphasized. As a profession that long focused on an individual's participation in daily occupation, occupational therapists (OT) play a very important role in helping patients in the PAC program in gaining as much independence as possible. OT working in the PAC programs assist patients to reach their full potential during the prime period hoping to restore life function and reduce the impact of disability. OT design individualized therapeutic tasks according to the client's needs to promote active movements that lead to smooth performance of functional tasks. In the PAC programs, occupational therapy service emphasizes more on motor skills relearning, prevention of disability and home environment assessment and modification. We hope to reduce the psychological damage caused by disease, and enhance patients' quality of life.

Through proper selection of appropriate patients and high-intensity training, patients can make significant progress in Post-Acute Care programs. Provision of active and integrated PAC care is efficient in function restoration or reduction of the degree of disability. It also helps to reduce subsequent medical expenses of re-hospitalization.

Title: Occupational Therapy for Children with Developmental Disabilities

Speaker 1: Nakama Chihiro

Education:

March, 2002 Tokyo Metropolitan University of Health Sciences, Department of Occupational Therapy (Bachelor of Occupational Therapy)

Work Experience:

April, 2002~March, 2005 Kawakita Rehabilitation Hospital

April, 2005~March, 2008 Tapic Okinawa Rehabilitation Hospital

April, 2009~November, 2015 Ryukyu Rehabilitation Academy

January, 2016~Present YUIMAWARU Co., Ltd. Children's Center YUIMAWARU. CEO

Abstract:

Education in Japan has been required to develop special needs education to establish inclusive education system which respects diversity and allows all children with or without disability possible to participate effectively in a free society by developing and learning together. On the other hand, at a school site, the number of children who need special needs education have increased more than double over the last decade. Strengthening cooperation with experts which are mainly teachers and building a team including families have received attention to achieve development of special need education. The opportunities of providing Occupational Therapist service at schools have increased recently though those have not been sufficient.

However, occupational therapy viewpoint attracts attention and Occupational Therapist is now necessary as an expert in schools. We, occupational therapists, have a view of “focusing on occupations” which other professions do not have and furthermore Occupational Therapist have a professional skill of “making executions of occupation happen.” This shows a new role of experts (Occupational Therapist) that empowers and consults teachers and parents so that teachers pursue “education that we want to provide (teachers’ work)” as opposed to “dealing with problematic behavior of children” which have been provided by experts until now. I would like to introduce a case of occupational therapy at school that has been conducted under a concept of “education we want to provide to all children.”

Speaker 2: Lichen Huang

Education

January, 2000 Boston University, Department of Occupational Therapy (Master of Science)

June, 1991 National Taiwan University, School of Occupational Therapy (Bachelor)

Work Experience

2002~Present Occupational therapist, Taipei City Hospital Child Developmental Assessment and Intervention Center (chief of therapists since 2014)

1996-2001 Occupational therapist, Taipei City School System

1991-1993 Pediatric occupational therapist, National University Hospital

Abstract:

Occupational therapy (OT) services for children with developmental disabilities(DD) have proliferated since its start in more than 50 years ago in Taiwan. Nowadays, these different models of OT service delivery have been developed. Beside medical institutions, OT services for children with DD are now provided in different contexts including schools, development centers, private practice and homes as a result of the advocacy of parents groups, amendment of Special Education law and the implementation of long term care services. With the expansion of intervention into the child's natural living environments, pediatric OT clinicians in Taiwan are constantly readjusting their service focus and models to meet the client's needs. Though challenging, it gives OT clinicians a better opportunity to understand the child's engagement in their daily occupation. On the other hand, researchers in pediatric OT area have also been examining and developing evidenced based programs and tools for children with special needs. Both OT clinicians and researchers in Taiwan have devoted efforts in promoting participation of our clients in daily occupations and empowering their families. This presentation will make a brief introduction of 1)current pediatric OT service practices for children with DD in Taiwan, especially in school systems and communities; 2) ongoing research and application of technology in intervention of children with DD; 3) OT professionals' participation in advocacy of rights for children with developmental disabilities.
